Benefits of Truck Mufflers

Increased horsepower : Adding a new muffler to your truck can increase the total amount of horsepower from your engine.

You can get a boost in power behind the wheel while at the same time increasing your overall performance as well.

Enhanced airflow : A new muffler can boost your entire exhaust system. The component can eliminate backpressure .

and allow more air to travel through the system. This will increase your engine's performance and can increase gas mileage.

Improved sound : Swapping out your old muffler and exhaust pipes can drastically increase the amount of noise your car produces.

If you drive a sporty truck and want to make an entrance, consider a muffler that adds a low grumble to your exhaust.

Maintenance & Composition

The oil in the cup must always be maintained at the level indicated. Make sure that the cup is free of mud and other impurities which might accumulate during working. When working in particularly dusty environments, the lower parts of the filter should be dismantled every day and cleaned with diesel fuel.

The filter must always be mounted in the vertical position. Tilts of up to 30° are acceptable, and also greater tilts for short periods of time, Working temperature from 0°C to 90°C, Use medium density oil, If the oil is changed on a regular basis, only minimal maintenance operations are necessary.

Two columns of horizontal dashed lines for writing notes.

The advantages of an oil bath air filter at a glance :

- ✓ Particularly robust metal design.
- ✓ Maintenance possible without spare parts and during operation.
- ✓ Flow rates of up to 24 m³/min are covered.
- ✓ High degree of effectiveness with only slight loss of pressure.
- ✓ Extended service intervals thanks to large reservoir for dirt capture.

Applications:

Heavy duty machinery, trucks, generators and all machines operating in low to high-level in dust conditions .
